

Profile

Full Stack Software Engineer with experience building healthcare-oriented and AI-enabled applications using React, TypeScript, Node.js, and PostgreSQL. Developed full-stack systems supporting real-world workflows, including AI-assisted features for automating user actions such as appointment booking and profile management. Strong in owning features end-to-end, from translating product requirements into scalable backend services and APIs to delivering performing, user-focused frontend experiences in fast-paced environments. Comfortable working in fast-paced startup environments with ownership of production features and rapid iteration cycles

Skills

Programming Languages

JavaScript, TypeScript, Ruby, C#, Python

Testing

Storybook, Jest, Cypress, Chai & Mocha

Backend

Node.js, Express, REST APIs, PostgreSQL, MongoDB

Mobile Development

React Native, Flutter

Frontend

React, Next.js, React Native, HTML, CSS, Tailwind

Design

Figma

Development Workflow

Git, Visual Studio Code, Docker, AWS, Agile/SCRUM workflows, Atlassian JIRA, Confluence

AI / Data Tools

Open AI API's, prompt engineering, REST APIs, Data modeling

Education

Lighthouse Labs, Full Stack Web Development Diploma	2023-01 – 2023-04 Vancouver, Canada
University of Alberta, Bachelor of Science in Psychology and Chemistry	2022-06 Edmonton, Canada

AI & Applied Features

- Built LLM-assisted workflows for automating user interactions in healthcare applications
- Designed prompt-based systems to translate user intent into backend actions
- Iterated on output validation and system behavior to improve reliability and user experience

Work Experience

Front-End Developer, HourBlock • Built full-stack features using React and integrated external APIs to support business workflows • Developed dashboards and tools used by clients for decision-making and analytics • Collaborated with product and design teams to deliver features from concept to production	2025-04 – Present Toronto, Canada
Full Stack Developer/ IOS developer, Quiz Arena • Co-founded and developed a full-stack application using React Native and Node.js • Owned feature development end-to-end, from backend APIs to frontend user experience • Designed scalable systems supporting 1,000+ users and 100,000+ game sessions • Improved performance by 75% through backend and asset optimization	2023-12 – present Edmonton, Alberta
Full Stack Web Developer, Expense Trend • Developed backend APIs and database systems using Node.js and PostgreSQL • Built scalable data pipelines and ensured reliable data flow across applications • Translated product requirements into functional backend and frontend features	2023-12 – 2024-04 Calgary, Canada
Manager/ Optician, Bright Vision Optical • Provided client support and resolved issues in a fast-paced healthcare environment • Managed operations and communicated technical and non-technical information effectively • Ensured high-quality service and reliability in daily workflows	2021-12 – 2024-01 Edmonton, Canada
Full Stack Developer, GamerCoach • Developed full-stack features using Next.js and Node.js • Integrated third-party APIs for scheduling and platform functionality • Improved SEO and performance, increasing platform visibility	2023-06 – 2023-12 Toronto, Canada

Projects

OptiVue - AI- Enabled Clinic Management System , *Optometry Management System*

- Built a full-stack healthcare application supporting patient management, appointments, and clinical workflows
- Developed AI-assisted features enabling users to interact via chatbot to perform actions such as booking appointments and updating patient profiles
- Translated natural language input into structured backend operations, improving usability and reducing manual workflow steps
- Designed scalable backend services and APIs using Node.js and PostgreSQL
- Focused on real-world healthcare use cases, improving efficiency in clinic operations

Tech Stack: Next.js 15, React 19, TypeScript, Tailwind CSS, ShadCN UI, NextAuth.js (planned), PostgreSQL, MongoDB, class-variance-authority, clsx, tailwind-merge

Interview Scheduler , *Scheduler for Candidates and Engineers*

A React & Next.js internal tool for recruiters to match candidate and engineer schedules via dynamic calendar grids, availability intersections, booking confirmations, conflict-resolution modals, and light/dark mode support.

Tech Stack: Next.js v15, React v19, TypeScript, Tailwind CSS, Radix UI, React Hook Form, VAUL, date-fns, Lucide React, cmdk, Recharts, tailwindcss-animate, embla-carousel, Jest, React Testing Library

ResumeCraft , *Resume Builder with Pre-set Templates*

An intuitive, live-preview resume builder featuring Google authentication, section-based drag-and-drop editing, instant template switching, auto-save to localStorage, PDF export, and a fully responsive design.

Tech Stack: Next.js 15, React 19, TypeScript, NextAuth.js (Google), Tailwind CSS, ShadCN UI, lucide-react, React Context, clsx, tailwind-merge, date-fns

Candidate Info Scraper 2023 Elections , *Webpage Scraper*

- Built backend API using C#/.NET to scrape and process large datasets
- Designed efficient data pipelines and normalized database structure
- Implemented filtering, pagination, and analytics endpoints

Tech Stack: C#, .NET Core Web API, Entity Framework Core, SQLite, HtmlAgilityPack, Swagger, Git

Remote-Together

Platform with the ability to find specific remote working locations for workers/students. Able to interact with a built in chat that works like a forum, user login, a map that renders markers with locations of interests and business details dynamically rendering.

Tech Stack: Google-maps api, React js, Material UI, Tailwind CSS, Axios, Node js, Express, PostgreSQL, Socket.io

Resource-Wall

A Pinterest reconstruct with the ability to create new resource links with details and description, ability to like and favorite as well as favorites page, editing page and new resource page with a home page that has the ability to search through all resources.

Tech Stack: NodeJS, PG, ejs, express, morgan, sass, bcryptjs, body-parser, cookie-session, dotenv

Simple Interview Scheduler

A React app that works as an appointment scheduler with the ability to edit, add and delete appointments on multiple days of the week with multiple testing implemented such as storybook, jest and cypress.

Tech Stack: React, Webpack, Babel, Axios, WebSockets, Storybook, Jest, Testing Library
